BJSS Capabilities: Software Development

High quality software engineering is ability-led, rather than process or doctrine-driven.

BJSS Software Development services are delivered by a team of skilled software engineers, specialising in the delivery of enterprise-scale software solutions. Technology-agnostic, skilled in a wide range of technologies and experienced in many business domains, BJSS adopts a disciplined engineering approach to software development that spans design and development through to performance tuning and quality assurance. This experience is captured in the BJSS Enterprise Agile delivery approach, refined over 20 years to provide a framework for predictable, reliable delivery.

BJSS Software Development Services

Experienced

- Technology agnostic
- Pragmatic and Delivery focused

- Resource Augmentation
- Delivery Team
- Project Team

Delivery-focused

- BJSS Enterprise Agile
- Pragmatic problem solvers
- Flexible role assignments
- Software engineering techniques

"The BJSS Enterprise Agile delivery approach and a flexible project management style meant that BJSS was able to work to a fixed price with very limited in-house resource and were responsive to changing requirements. Their commitment to deliver within a specific timeframe meant Zopa went live on time." **Tim Parlett, CTO, Zopa**

Zopa, the world's first peer-to-peer online lending marketplace, was delivered by BJSS against a backdrop of a fixed delivery date, significant requirements churn and an evolving regulatory environment.

BJSS Delivered

BJSS assembled an experienced development team and worked closely with the Zopa founders to help them realise their vision. Leveraging its financial market delivery experience, the team built an innovative lender/borrower matching engine and rules-based credit checking solution with links to a variety of external agencies.

Benefits

BJSS delivered a secure, reliable flexible P2P marketplace with a short time frame to a pre-agreed fixed development price. It adopted a flexible approach to partnership with this start-up enterprise in order to accommodate frequent changes in requirements and the emerging regulatory environment.

"I've engaged BJSS on a number of occasions to support a variety of projects. In every case their people have been

technically excellent and have really worked hard to understand our business and add value to our projects.”

**Development Manager,
Post Trade Reporting
Services**

This investment bank wanted to improve its service to for corporate clients looking to access money market and FX trading markets. Requirements included a rich user experience, delivered via a web-based trading portal that also presented market research, news and historical prices and trades.

BJSS Delivered

Working closely with the bank's business analysts the BJSS delivery team specified the architecture and interactions between the various pricing and trading APIs, and was responsible for the agile delivery of the solution. The technology stack includes a rich customisable portal developed in Silverlight connecting through Diffusion to a Java service layer.

Benefits

The solution re-established the bank as a leader in the sector, attracted industry recognition in the form of several awards. A rapid development and test team completed assured the deployment of the solution to the client's provider, prior to handing over to client teams for on-going maintenance and enhancement.
